EDUCATION

University of California, San Diego – La Jolla, CA

Jun 2026

Master of Science, Data Science (GPA 3.92)

College of Engineering Guindy, Anna University – Chennai, India

Apr 2023

B.E. in Computer Science and Engineering (GPA 3.98)

EXPERIENCE

Software Engineer – Société Générale Global Solution Centre

Jul 2023 – Aug 2024 | Chennai, India

- Contributed to code review process for **40+** pull requests across 2 engineering teams, maintaining test coverage above **85%** for production releases.
- Reduced code review turnaround **30%** by leveraging LLM based tools to generate and validate unit tests across 7 datasets.
- Applied system design principles to architect distributed ETL pipelines across AWS S3 and Hadoop, ensuring maintainable production code for **50M+** records.
- Cut policy lookup time **60%** by designing and deploying REST APIs and a full-stack internal platform in JavaScript, serving 200+ employees.
- Designed and deployed RESTful backend services with real time endpoints supporting **200+** internal stakeholders.
- Eliminated **100%** of manual analysis time and improved compliance team efficiency by **50%** by developing AML alert classification dashboards processing **50M+** daily transaction records with real time filtering.
- Accelerated data processing time by **40%** by implementing distributed Spark jobs and CI/CD pipelines across AWS S3 and Hadoop, optimizing query performance on **50M+** records.
- Migrated **50M+** records with **0** data loss by spearheading cross-functional architectural design reviews for the transfer of **7** critical AML datasets, resolving schema incompatibilities.

PROJECTS

EcoNode - Carbon Aware Forecasting for AWS Jupyter Workflows | [Link](#)

Mar 2026 – Apr 2026

- Engineered **5-stage data quality pipeline** with outlier detection, gap analysis, and statistical validation by processing **60 days** of hourly grid data across **3 ISO regions**.
- Achieved **45% forecast improvement** over persistence baseline (MAE **1.59**) by building weather-enhanced Prophet models with 3 climate regressors across **3 US grid regions**.
- Attained **86% prediction interval coverage** on **168-sample** holdout windows by tuning region-specific Bayesian uncertainty configs over **60 days** of hourly EIA and Open-Meteo data.

HemsHappen App RAG-Based Medical Chatbot | [Link](#)

Sep 2025 – Feb 2026

- Achieved **100%** clinical safety pass rate on 38 patient queries, outperforming Med42-8B by **42%**
- Accepted at Digestive Disease Week 2025, validated by board-certified gastroenterologists for clinical accuracy
- Built RAG backend using FAISS vector search and Claude Sonnet 4 over curated GI clinical guidelines

SplitRight - Expense Splitting PWA for Roommates | [Link](#)

Oct 2025 – Dec 2025

- Built full-stack PWA using Next.js 14, Node.js, and PostgreSQL with maintainable, testable code and Dockerized deployments via Vercel and Railway.
- Designed intuitive UI flows for 3 split modes and implemented unit and integration tests, achieving 90% test coverage across core features.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript

Data Engineering and Databases: SQL, Apache Spark, Hadoop, FAISS, PostgreSQL

Cloud and DevOps: AWS (S3, Athena, DynamoDB), GitHub CI/CD, Palantir Foundry, Docker

Web Frameworks: Flask, React, Next.js, Node.js, FastAPI, HTML, CSS, Vercel

Machine Learning & Libraries: Prophet
